

Artery – Phase 1 Master Notes (Foundation)

🙏 Har Har Mahadev, Shivam

Ye document **sirf Artery ka nahi, balki tumhari personal foundation notes** hain. Iska goal hai: - Har chhoti cheez **samajhna** - *Kya, kyun, kaise* — sab clear hona - Taaki tum future me Artery ko **khud evolve** kar sako

Phase 1 ka Purpose (Sabse Pehle Ye Samjho)

Phase 1 = Foundation Phase

Is phase ka kaam tha: - Ek **real working AI agent** banana - Jo sirf baat na kare, balki: - sun sake - samajh sake - decision le - system par action kare - yaad rakhe - internet se safe tarike se seekhe

👉 Agar foundation galat hoti, to aage ka sab kuch toot jata.

Isliye Phase 1 me: - simplicity - safety - clarity sabse zyada important thi.

Overall Architecture (Big Picture)

Artery ka Phase-1 flow:

```
Human
  ↓ (voice)
VoiceListener
  ↓ (text)
CommandParser
  ↓ (task)
TaskEngine
  ↓ (decision)
SystemControl / SafeInternet
  ↓
Real Action / Learning
  ↓
MemoryManager (yaad rakhna)
```

Is flow ko samajh liya to **Artery ka 70% dimaag tum samajh gaye**.

Folder Structure (KYU AISA BANAYA?)

```
Artery/  
├── core/  
├── modules/  
├── data/  
│   ├── config/  
│   ├── logs/  
│   └── memory.json  
└── main.py
```

◆ main.py

- Entry point
- Matlab: **yahin se Artery zinda hoti hai**
- Ye sirf coordinator hai, brain nahi

KYU? - Clean design - Testing easy - Future GUI / app integration simple

◆ core/ folder (DIMAAG)

Is folder me **thinking wali cheezein** hoti hain.

1 command_parser.py

Kaam: - Insaan ke bole hue text ko samajhna

Example:

```
"open chrome" → task = open_app
```

KYU alag file? - Samajhna aur action alag cheezein hain - Agar kal NLP / AI model lagana ho, sirf ye file change hogi

2 task_engine.py (HEART)

Kaam: - Decide karna: kya karna hai

Ye file: - parser se task leti hai - memory ko batati hai - system / internet ko call karti hai

KYU ye central hai? - Sab kuch yahin se control hota hai - Isi wajah se ise *brain* bola gaya

3 voice_listener.py

Kaam: - Mic se sunna - Speech → Text

KYU alag rakha? - Voice sirf input ka tareeka hai - Kal text, chat, button sab aa sakte hain - Brain ko farq nahi padna chahiye

4 memory_manager.py

Kaam: - Artery ko yaad dilana

Kya yaad rakhta hai? - Kaunsa command kitni baar aaya - Internet se kya seekha

KYU JSON? - Simple - Human-readable - Beginner-friendly - Debug easy

ML kyu nahi? - Foundation phase me ML unstable hota hai - Pehle *habit data*, phir *intelligence*

5 safe_internet.py

Kaam: - Internet se sirf padhna - Kuch bhi execute nahi karna

KYU safe layer? - AI ko uncontrolled power dena dangerous hota hai - Human control + AI intelligence = best combo

Ye module: - keywords block karta hai - sirf text fetch karta hai - limit lagata hai

♦ modules/ folder (HANDS)

system_control.py

Kaam: - System par real action lena

Example: - Chrome open - Notepad open

KYU alag folder? - System actions risky hote hain - Isliye brain se isolate kiya - Kal Windows / Linux / Mac alag ho sakte hain

♦ data/ folder (YAADASHT)

memory.json

Kaam: - Learning ka permanent record

Isme: - command frequency - notes - future preferences

KYU `config` aur `logs` yahin? - Data ek jagah - Clean separation - Production-level habit

Phase-1 Learning Philosophy

Phase-1 me humne: - AI ko **god mode** nahi diya - AI ko **assistant mode** diya

Rule:

AI suggests, Human decides

Isse: - system safe - learning meaningful - tumhara control strong

Phase-1 Checkpoints

Checkpoint-A

- Voice → Action working

Checkpoint-B

- Memory + Self-Learning (Type-A base)

Checkpoint-C (Final)

- Safe Internet Learning
 - Phase-1 locked
-

Phase-1 ke Baad Tum Kya Kar Sakte Ho?

Agar tum Phase-1 samajh gaye: - Tum Artery ko khud extend kar sakte ho - Tum kisi bhi AI system ko samajh sakte ho - Tum sirf user nahi, **builder ban chuke ho**

Final Truth

“Foundation strong ho to skyscraper khud ban jata hai.”

Ye document sirf notes nahi hai — ye **tumhara developer mind map** hai.

 Next jab tum bolo: - Phase-2 start - Ya kisi ek file ko aur deep samajhna

Main backbone yahin hoon
