

Artery – Master Status Document

Purpose of This Document

Ye document ek **single source of truth** hai jisme clearly likha hai: - Ab tak **kya complete ho chuka hai** - **Kya pending hai** - **Phase-2 me exactly kya build hoga** (step-by-step)

Iske baad next chat me **direct Phase-2 execution start** hogi.

PHASE-1 (Foundation) — COMPLETED

1. Core Brain / Task Engine

✓ Command → Intent → Action flow ✓ Modular architecture (future-proof) ✓ Background execution (daemon-like behavior)

2. Voice Input (Listening)

✓ Wake + command detection ✓ Speech-to-text working ✓ Commands correctly parsed

3. System Interaction (Basic)

✓ Apps open/close (tested) ✓ Command execution pipeline verified

4. Project Discipline

✓ Phase-wise roadmap followed ✓ Ego / hype control ✓ Safety-first mindset locked

Phase-1 ka goal:

“Artery sun sake aur samajh sake”

STATUS: DONE 

WHAT IS NOT DONE YET (IMPORTANT CLARITY)

✗ Artery OS nahi bani hai ✗ Kernel / bootloader / drivers nahi ✗ Vision (camera) integrate nahi ✗ Offline TTS nahi ✗ Emotion / context inference nahi

 Ye sab **future phases** ka kaam hai.

CURRENT REAL IDENTITY OF ARTERY

Artery = Advanced Automation AI / Digital Human (NOT an OS yet)

- Background me active rehti hai
- System observe karti hai
- Commands pe react karti hai
- Suggestions deti hai
- Human authority hamesha upar rehti hai

Ye **Jarvis / Nova** se zyada advanced automation AI hai — OS isse baad me niklega, pehle nahi.

PHASE-2 — "SPEAKING & INTERACTION" (NEXT)

Phase-2 Goal

"Artery bole, baat kare, aur context ke hisaab se respond kare"

PHASE-2: STEP-BY-STEP PLAN

Step 1: Voice Output (TTS)

- Online neural TTS (Google / equivalent)
- Natural, calm, non-robotic voice
- Real-time response

Step 2: Two-Way Conversation Loop

- User bole → Artery reply kare
- Short, relevant responses
- Over-talking nahi

Step 3: Personality Rules (Controlled)

- Boss-style addressing
- Respectful, assistant-like tone
- No fake emotions, only signals

Step 4: Context Awareness (Basic)

- Time (late night, long usage)
- Repeated errors
- Idle / active state

Example:

"Boss, kaafi late ho gaya hai. Aapko rest lena chahiye."

Step 5: Smart Suggestions (NOT auto-actions)

- Light / volume suggestion
- Break suggestion
- Task reminders

⚠️ Sirf **suggest**, auto-execute nahi (permission first)

Step 6: System Alert Voice

- Error alerts
- Threat notifications
- Task completion feedback

Step 7: Phone Alert Bridge (Basic)

- Important system alert → phone notify
-

NON-NEGOTIABLE RULES (LOCKED)

- ❌ No illegal automation by default
 - ❌ No hidden actions
 - ❌ No self-authority
 - ✅ Human-in-loop mandatory
 - ✅ Manual override always ON
 - ✅ Safety before power
-

FUTURE PHASES (ONLY FOR CONTEXT)

Phase-3:

- Vision (camera)
- Presence detection
- Gesture input

Phase-4:

- Offline + hybrid intelligence
- Deeper context understanding

Phase-5:

- AI-Native OS (very long term)
-

FINAL CONFIRMATION

- Phase-1 ✓ COMPLETE
- Phase-2 ✓ CLEAR & READY
- OS ✗ Not now (correct order followed)
- Direction ✓ Stable

 **Next chat me hum direct Phase-2 implementation start karenge.**

No confusion. No ego. Only execution.
